Sustainability Policy

Purpose and scope

This policy covers our marquee hire, manufacturing, workshop and installation activities, including decisions we make with suppliers and subcontractors.

Equipment and materials

We aim to extend the useful life of frames, PVC covers, flooring and fittings through inspection, maintenance and repair where safe and practical. When a component needs replacing, we consider whether it can be replaced individually. We aim to plan material use carefully and reuse suitable offcuts where practical.

Waste and transport

We aim to separate reusable and recyclable materials where facilities accept them, and to use authorised waste contractors for disposal. We plan vehicle loads and journeys around each project, combining deliveries and collections where practical.

Purchasing and site work

We consider durability, repairability, material use and transport when buying equipment and materials. On site, we work with clients to protect surfaces and minimise avoidable damage and waste.

Review and enquiries

Our directors are responsible for reviewing this policy and identifying practical improvements. For project-specific environmental requirements or questions, contact hire@ukeventstructures.com.
